Live-Music: Digital Popularity vs Reality

→ From Streams to Stages: To what extent do digital streaming metrics predict the physical reality of global concert tours?

Streaming & Ticket Power

- How does the number of Last.fm listeners correlate with the scale of an artist's tour, measured by the number of events scheduled?
- How does the concentration of an artist's streaming activity on a few top tracks relate to the intensity of their touring, measured by events per year?
- How do current Last.fm listener counts differ between artists who appeared in Spotify Weekly Charts between February 2023 and February 2026 and those who did not?

Geographic Analysis

- What is the ratio of revisit cities to new cities on an artists current tour?
- What proportion of an artist's performances take place in capital cities compares to non-capital cities?
- How well do the countries where an artist has the highest listener reach on Last.fm align with the countries where they perform on their Ticketmaster tour?

Market time & Scheduling

- How does average days between concerts differ between high and low Last.fm listener count artists?
- To what extent does an artist's Last.fm playcount influence the percentage of concerts scheduled on weekends?
- How does lead time (days between sale start and the first concert date) correlate with an artist's Last.fm listener count?
